

Enabled by new technology exclusive to Cleaver-Brooks, the C2X-HE is the first two-stage economizer in the industry to achieve 94% efficiency. Actual operational efficiency depends on boiler firing rate, secondary-section water flow and temperature. Cleaver-Brooks quantifies and guarantees its application-specific efficiencies.

## **NEW** **C2X-HE** **Two-Stage Heat Recovery**

### **UP TO 94% HIGH EFFICIENCY AVAILABLE FOR 100 – 800 HP BOILERS**

#### **Operation**

The economizer's first stage returns wasted stack heat to the boiler feedwater. Its second-stage condensing section delivers best-in-class overall system efficiency.

#### **Applications**

Ideal for 50% to 100% boiler makeup water or process hot water applications. Optimal performance in food processing and laundry applications.

#### **Compact Size**

Smaller and lighter than current two-stage economizer models.

#### **Ease of Maintenance**

Heat exchanger is easily accessible for service and cleaning.

#### **ASME U-Stamp Certification**
